#### C2 Support

ASI provides Information Management and Technical Support services for Command and Control functional requirements in support of the Global War on Terrorism.

Expertise and experience in:

- Global C2 Systems and Applications,
- Force Tracking databases, Management,
- and Global Broadcast Services.

#### Science & Technology

ASI has 20 years of experience providing medical and clinical trial support services including:

- Study Design
- Protocol Development
- Investigator Training
- Study Monitoring
- Site Audits
- Data Mining and Analysis

#### Systems Engineering

ASI leverages its understanding of core business operations to effectively support development and integration of complementary IT systems and applications. Our experience includes:

- System Design, Integration and Support
- LAN/WAN Analysis and Design
- Operational Support
- Remote Diagnostics
- Wireless Networking
- Database Integration
- Custom Software Development

#### IT Security

The ISS support includes Security Certification and Accreditation Package (SCAP) and Annual Security Assessment package development in accordance with agency guidelines including guidance from the National Institute of Standards and Technology (NIST).

#### Program Management

ASI supports all aspects of planning, organizing and conducting of our client's mission including:

- Program Management Support
- Program Control Support
- Program Implementation and Engineering Support

#### Networking & Communications

ASI provides engineering services in support of the feasibility and design studies for the development and deployment of emergency communication systems. Activities include the design and development of security systems and procedures supporting operations. ASI also provides on-site support for the construction of the communications systems, the installation and configuration of equipment and operational testing.

#### Safety Programs

ASI provides safety policy development and review and safety program support management services.
